(a) Resolving power of the design
naive paired t
Nadeau–Bengio corrected
leakage effect, 6.8–10.9 pp
observed differences among
the four modern architectures
minimum detectable difference (pp)
number of cross-validation folds k
(b) Power against true effect size
80% power
median architectural
difference: 0.70 pp
k = 5
k = 10
k = 20
statistical power
true difference in balanced accuracy (pp)
